

Stay Safe[®] System Facilitates Continued Employment Travel

Laurie Carpenter¹, RN, CPDN; Douglas Curtis
(1) DaVita Inc., Lakewood, CO

INTRODUCTION

Purpose: To provide guidelines regarding luggage use, communicating with both TSA and airlines, and packing items to ensure safe employment travel both domestic and internationally.

Background: We initially developed this system for a patient who travels around the globe as an international banker. His job has taken him throughout the U.S., Canada, Mexico, Puerto Rico and Europe logging over 100,000 miles since December 2008.

METHODOLOGY

- From experience, we determined the type and size suitcase that could accommodate both dialysate and ancillary supplies while remaining manageable for the patient.
- We developed a checklist to assist with the packing of dialysis supplies and ancillary equipment. The checklist includes back-up emergency contact information for the destination city.
- Our nephrologist drafted a letter to clearly describe the suitcase contents to the TSA and provide physician contact information, if needed.

CONCLUSIONS

- We have established a consistent, practical system.
- This travel system enables our patient to:
 - remain actively employed while performing CAPD,
 - meet his outcome goals and
 - exceed adequacy standards.

KEY LEARNINGS

- ✓ Dialysis does not have to mean the end of employment travel.
- ✓ By using a checklist designed from experience and the Fresenius Stay Safe system for CAPD our patient remains employed, healthy and active.
- ✓ We have expanded the use of our travel system for use by all of our traveling patients

We thank the patient who participated in this study, Gulf Coast Dialysis, and DaVita Clinical Research[®] for support in preparing this poster. DCR is committed to advancing the knowledge and practice of kidney care.
