

Late Phase Clinical Trials (II-IV)

The Most Experienced Renal Site Network

With our long history of helping advance kidney care, we bring unparalleled depth of knowledge and clinical expertise in renal research and clinical trial operations for Phase II-IV trials.

We use our dense patient-level data to assist in protocol feasibility, site identification, and rapid enrollment of trial subjects. Your trial will be supported by a team of experts working with 1/3 of the total US end-stage renal disease (ESRD) patient population. Our team has an over 25-year track record of employing a resourceful approach that can help you to make confident decisions and meet your timelines.

No other clinical research organization has deeper experience in conducting renal trials. DaVita Clinical Research® has had direct engagement on every end-stage renal drug that has received FDA approval in the past 15 years.

- Access to **188,000 ESRD and 90,000 CKD patients** providing the unique ability to select sites and enroll trials quickly in the US
- Access to the largest renal patient database with **14 billion data points**
- Access to our growing, data-rich chronic kidney disease (CKD) network
- More than **150 investigative physician practices** and more than 250 sites
- Protocol review and feasibility consultation
- Inclusion/exclusion sensitivity analysis via our EMR database
- **Access to our preferred DaVita staffed sites for CKD and fast-track trials**

Our access to patients and our long-standing relationships with investigator physicians allow us to get study sites up and running quickly using data-driven metrics to select the best sites for clinical studies.

Utilize our Site Support Services

Specialty Areas

- Early Stage CKD
- Chronic Kidney Disease on Dialysis
- Chronic Kidney Disease Bone Mineral Disorder
- Secondary Hyperparathyroidism
- Chronic Kidney Disease-Associated Pruritus (Uremic Pruritus)
- Complications of Chronic Kidney Disease
- Diabetic Kidney Disease
- Polycystic Kidney Disease
- Anemia due to Kidney Disease
- Iron deficiency
- Hypertension
- Hyperkalemia
- Measurement of Kidney Function
- Glomerular disease
- Vascular calcification
- Calcific Uremic Arteriopathy (Calciophylaxis)
- Anticoagulation in Chronic Kidney Disease/Dialysis

DaVita Clinical Research has an over 25-year history of strong relationships with physicians and integrated project management, helping us to use our data to enroll and complete your trial on time. We are the renal clinical trial experts.

Let the renal experts help you.

Talk to a DaVita Clinical Research® representative today at **1-888-345-2567** to learn more about our renal expertise.

Services

Full service site management support for all phases of research.

- Protocol Consultation
- Real World Population Analysis
- Network Feasibility
- Centralized Budget Development
- Regulatory Collection
- IRB Submission
- Site Contracting
- Efficient Site selection
 - EHR-driven patient recruiting
 - Efficient site start-up
 - Enrollment management
 - Project management
 - Payment Reconciliation

Support

We recognize the need to be the strongest research partner we can be. Our experienced Clinical Research Integration Team partners with our study facilities to:

- Support integration of clinical research into facility operations
- Facilitate effective communication and collaboration between facility staff and study teams
- Enhance the experience for all parties involved in clinical research
- Achieve our top priorities: Safety and continuity of care for patients
